Opinion on the outlook for industrial production*

Balance of opinions: Industrial production rebounded across the board. This rebound was more marked in the sectors that were most affected in March and April: the automobile, rubber and plastic, textiles, and electrical goods sectors. Services activity also picked up. The rebound was particularly pronounced in the car repair, personal services, transport and temporary work sectors. Little improvement was seen in the telecommunications and IT sectors. The hotel and catering, consumer and advertising sectors, and the publishing sector lost ground. Staff levels continued to decline.

* A positive outlook remains dominant, but growth is expected to be slower. For further details, see [CON - IND - SER - CON - expect. for the construction, services and construction may-2020.pdf \(PDF - 90 Ko\)](#)
