

Europlasma transferred to Alternext from July 21st, 2009

Europlasma, the French Group specialized in clean technologies and renewable energy production, has received approval from NYSE Euronext Paris to transfer the listing of its shares from the Marché Libre to Alternext.

The transfer of the 11,383,752 securities comprising the share capital will be effective from Tuesday July 21st, 2009 and will not be combined with any related transactions. The shares, which are listed on the Marché Libre until July 20th, 2009 (inclusive), will be registered on Alternext the following day, under the same ISIN FR0000044810, while the ticker will become ALEUP.

As of the transfer, a liquidity agreement will be implemented by Oddo & Cie. Europlasma shares will be able to be traded continuously, from 9 am to 5:30 pm (French time), with a pre-opening phase from 7:15 to 9 am and a pre-close phase from 5:30 to 5:35 pm.

Europlasma's inclusion on Alternext marks a new stage in the Group's development and is in line with the structural and operational progress made since the start of the year. To accompany its listing on Alternext and benefit from better stock market visibility with a broader audience of investors and analysts, Europlasma has further strengthened its governance and organization, with the creation of an Advisory Board, while stepping up the rate of its communications and enhancing the information available on its internet site. At the same time, Europlasma has focused its efforts on two key areas:

- Further strengthening its commercial actions, either alone or in partnership with other industrial players. These actions are being carried out alongside a sustained R&D activity, looking to open up new outlets on a buoyant market: industrial waste reclamation and depollution;
- Ramping up CHO Power's energy production activities, forging ahead with four electricity from waste (EfW) projects launched in 2008, including the Morcenx pilot project. The subsidiary is currently holding talks with several Anglo-Saxon funds specializing in this sector with a view to financing the gradual deployment of its energy from waste projects. Furthermore, in June 2009, the technology developed by CHO Power was named Best Renewable Energy Solution for France in the Energy and Environmental Awards organized by the British magazine The New Economy.

Europlasma's transfer over on Alternext has been overseen by Atout Capital as the listing sponsor.

The presentation document published by Europlasma to accompany its registration on Alternext is available online at www.europlasma.com, or by simply sending a request to contactbourse@europlasma.com or the company's headquarters.

About Europlasma

Founded in 1992, Europlasma is a French Group specialized in clean technologies and renewable energy production. The Europlasma Group is made up of four main units and 260 employees who are all firmly committed to sustainable development and experts in waste processing and reclamation. In 2008, the Group grew by nearly 20%, with €35.3 million in revenues.

- > **Europlasma** develops, produces and markets waste processing and energy production solutions based on its proprietary plasma torch technology.
- > **Inertam** is the global specialist for the destruction and reclamation of asbestos and hazardous waste.
- > **CHO Power** is a waste gasification power producer (EfW – Electricity from Waste).
- > **Europe Environnement** is the European market leader for ventilation and air depollution systems for industry.
