Elderly ☐ male ☒ female resident age of 96 YO is admitted to unit
from Albert Einstein MC via Stretcher at 11:40 am
Accompanied by 2 EMTs and transferred to bed with assist of 2.

Diagnosis: Right Cerebral infarct, Hypertensive Cardiovascular disease with Chronic Right sided Heart Failure with pulmonary HTN.
PMH: Afib on AC, DM2, CHF, HTN, PHTN.

Reason for Rehab Referral: CVA

☒ Alert & Oriented x 1

Admission assessment is done as follows.

Scalp and hair is clean.

No Lumps/wound

No discharge from eyes, ears and nostrils.

Oral mucous membrane moist, pink and intact, moist teeth missing and or broken.

Neck is supple.

Heart beat is regular.

No acute resp distress observed during the assessment.

RT breast with large thick wart.

Abd wall soft and non-distended.

Genitalia/Sacrum no evidence of skin breakdown.

LT Lateral shin with small discoloration

Peripheral pulse palpable.

Nails mycotic

Extremity skin intact.

No edema on lower extremities

No s/s of pain observed during the procedure

Safety and fall precaution maintained.

Will continue to monitor

Vital Signs upon admission

165/90; 97.7; 68; 17; Spo2 96% on RA.

Admit/Readmit Medical Note:

Allergies:NKA

1. History of Present Illness:found slumped in chair with slurred speech and facial droop.In ED imaging showed small acute left corona radiata and internal capsule CVA's.Also chronic left lacunar CVA.

Past Medical History:

- 1.Chronic atrial fibrillation-on eliquis 2.5 mg p BID
- 2.moderate malnutrition-supplements and monitor weights
- 3.HCVD with chronic diastolic CHF-on metoprolol 12.5 mg po BID and losartan 25 mg QD.
- 4.Generalized OA
- 5.Dementia-supportive care
- 6.DM-2-on metformin 500 mg po BID.
- 7.Tricuspid regurgitation
- 8.Pulmonary HTN
- 9.Oral dysphagia-on a mechanically soft diet

Social History:N/C

Family History:N/C

2. Physical Exam:

Temp-98.2 F
Pulse-74
Resp.-18
BP-163/92

General Exam:in NAD.

Progress Notes

HEENT:right lower facial droop.
Chest/Lungs:CTA.
Heart:IRR. no murmur.
Genitalia/Rectal:deferred
Skin:intact.
Neck:supple without masses
Breasts:no masses appreciated.
Abdomen:soft,non-tender.
Extremities:no edema.
Neuro:A&O x 1. right facial droop.Follows simple commands.RUE weakness.slurred speech.
Other:

3. Lab, EKG, and X-Ray:
imaging and labs from hospital reviewed.

Swallow evaluation completed s/p re-admission following hospitalization for slurred speech and facial droop with PMHx significant for: advanced dementia (baseline alert to self), T2DM, Afib on AC, CHF, HTN, and PHTN. Imaging revealed small acute infarct in L corona radiata and internal capsule posterior limb. MRI brain revealed same + small subacute infarct within the L periatral white matter. Resident known to this SLP Dept. for dx oral dysphagia; discharged from last COT (6/15/23-6/28/23) on level 6 soft & bite-sized diet and thin liquids. Resident seen by MMC SLP Dept. for CSE on 3/5/25; recommended puree diet and mildly thick liquids + H2O protocol. Discharged from hospital and admitted back to this facility on same. Results of evaluation suggestive of oropharyngeal dysphagia, in setting of acute CVA. Noted with x1 throat clearing episode post trial of thin liquids. Recommend to maintain level 4 puree diet and level 2 mildly thick liquids (+H2O protocol), with Aspiration/Choking Precautions. Initiate skilled ST to facilitate placement on safest, least restrictive diet. Discussed POC with legal guardian (E. Borrero); in agreement. Resident's swallow function corresponds to Section K0100 Part C.
